

[Project title]

ECSE 4560/6560 Modern Communication Systems

Project Midterm Report

[Date]

[team member1 name, abcde@rpi.edu]

[team member2 name, abcde@rpi.edu]

1. Abstract

Summarize the project objectives, motivation, and technical description. *Emphasize and highlight any changes in the project objective compared to the proposal.*

2. Evaluation Plan

Choose one or more ways to evaluate your project – (i) Matlab Simulation with Toolbox, (ii) Evaluating with existing Datasets (iii) Hardware Experiments. Show how would you carry out the evaluation. A block diagram or image would help describing your evaluation plan. Evaluation Metrics you will use (e.g., BER, throughput, accuracy, robustness).

Emphasize and highlight any changes in the project Evaluation Plan compared to the proposal. Be very specific on your toolbox/dataset/hardware. List only those evaluation metrics that you actually intend to show. Provide any baseline comparison (as appropriate) to show and compare your results with other simple solutions. Provide any parameters you will vary to analyze its impact on end-end performance.

3. Progress so far & Preliminary Results

Present your progress so far, with evidence. What is already implemented. Initial results: one or two plots or tables with a take-away under each. If results are negative or inconclusive, state what you learned and how it informs the next steps. What are lessons learned - any surprises, failures, or design pivots. Also mention components in progress and/or current blockers (make sure to actively discuss with instructor to avoid any blockers, e.g. hardware availability, datasets etc).

4. Updated Timeline

Provide an updated timeline and mention which tasks have been already accomplished (by the time of submission).

Actionable Item	Timeline
x	Oct 2 -16 (two weeks)
y	

Keep the report within 2-4 pages. Provide any references papers/sites/hardware manuals as cited in the report.
