

1. Gratitude: Quiz from GGSC

75/105, that sounds about right. I'm grateful for all the good things in life, but also realistic. Things could be better, the world is on fire, there are things in life that I'm unhappy with, etc, so given all that, I'm pretty happy with a 75 lol

2. What makes you happy?

Relationships with others. I value time with my friends and family above all. My biggest hope in life is that when I graduate I can get a good job in a location close to my friends so I can see them as much as possible, and that pays enough and has a flexible enough schedule for me to be able to fly back to NY to meet up with my RPI friends. Nature is a close second.

3. My philosophy for a happy life

Same as the last entry, strong relationships. "Why not change the world?" well because that's hard. As tempting as it is to do something big and truly meaningful to the world, nowadays, that often means making a lot of sacrifices, and I don't think I'm built for that. I just want to relax, find a job I'm good at so I can do a fair share of work, get paid well, and have all the free time I need to spend with others.

4. Life Orientation Test score

10/(20?) I think this is a bit of a silly test to be honest. I'm not optimistic about life, nor am I pessimistic, I think about most things very simply, rationally, fairly. Hope for the best, prepare for the worst, and expect something right in the middle. In my opinion, if you expect good things to happen, you'll be let down and ill prepared for most things. If you expect bad things to happen, you'll probably just over stress yourself. Be realistic about what is actually likely and you'll be well prepared.

5. Consider your piece of the pie (3)

I can't control most things, notably just... the world around us. But I can work to change the 10%, that's why I'm at RPI, suffering and sacrificing a bit of the 40% now to help the 10% long term. I've recently learned to not sacrifice that full 40% though, you need some level of human interaction and relaxation to keep yourself from going crazy.

6. Person-activity fit (3)

Doing this late so looking forward to this next week or two of finishing finals and hanging out before commencement. I really have no idea what I'll be up to in this time, but with beautiful weather and everyone finishing up classes, I'm sure there will be lots of time touching grass and playing volleyball in the back yard, going on hikes, and just doing.. some of what college is meant to be?

Today I'll be kind to myself and clean my room. I'm outside right now with friends as I work on this. And I'll look for any chance I have to take a break and lend a hand with dinner, friends moving in or out, etc.

7. Positivity Ratio (3)

Positive 10 Negative 4 Ratio 2.5

Feels a little unfair? I'm quite happy, I've had a wonderful day, and still a "failing grade"? I've had negative emotions over the past 24 hours, I've dealt with them quite healthily, and I've not had the *strongest* positive emotions, but I've really enjoyed what I've had. If I had to make a ratio to rate my past 24 hours, I'd say probably a 4 or 5?

8. Sense of Purpose Quiz (4)

51/70, feels about right. I feel like I could make some large impact on the world, but again, that's a lofty goal that takes immense sacrifice, and I'm not built for that. I'm perfectly happy living a life where I just worry about the happiness of myself and those around me. I don't need to change the whole world, just the world for a few people I'm close to.

9. How do you want to be remembered? (4)

Again, for the little things. I just want to be remembered as a good friend, a good neighbor, etc. I want to improve the lives of people around me and live a good life myself.

10. Coping methods (4)

Well that varies a lot. When a friend died in front of me in middle school, in my reflections and coping I became quite a bit more spiritual. When my partner left me I... didn't really have a coping mechanism for a long time, I was just sad, at some point started drinking a lot, eventually found other friends that filled that void. When I was questioning my identity for years I often said "no point in crying over spilt milk" and proceeded to cry about it a lot and pretend everything was fine. Overall what works for me is simply just... talking to people about it. Sometimes it's hard and there's not really anyone to talk to, in which case I've just sorta bottled it up and been sad about it until I found someone to talk to.

11. Mindfulness meditation (5)

I actually do this quite a bit. Usually when I'm feeling good, maybe when I'm outside on a nice day, maybe while relaxing inside, sometimes when I'm not doing okay and I'm getting overwhelmed and can realize I need to take a step back. Just paying deeper attention to all my senses, to my thoughts and emotions, it's nice

12. Savoring accomplishments (5)

I bought a VR headset from a friend last summer, and spent many days learning to play Hotdogs Horseshoes and Handgrenades. One of the game modes consists of a series of challenges, anytime you fail one, you go back to the previous challenge. I finished it at the end of the summer with a total run time of over a week. I was by myself, way too late at night, and my time wasn't exactly good, but it felt amazing completing that last challenge.

13. Savoring: Plan a perfect day (5)

I can try to do this sometimes, but I rarely have the time on a weekend to actually do this. But most weekends I have some vague plans of things going on around campus, and the weekends

where I'm free enough or productive enough to get out and do those things are very good weekends and usually lead to a more productive and happy couple days afterwards

14. Deliberate practice (6)

Counter Strike Global Offensive. I played this game a lot in high school, I really did use all of these principles, and I've been trying hard to keep up with it over the summers in college. I used to have a very good very deliberate practice, an hour solo practicing skills, an hour against other players practicing skills, two hours playing competitive games, an hour reviewing the replays of those games seeing what I did good and what I need to work on, and some time learning new setups or practicing old ones. I loved having time to do this, I found the constant push towards self improvement so satisfying. I'd watch pro matches, their replays, and match breakdowns, taking pen and paper notes, finding ways to improve my own games. I saw every loss *and* every win as a learning opportunity.

15. Goal setting (7)

Doing homework, Studying, sleeping, attending class, getting ready in the morning, eating, talking to people. That's honestly about it these days, I've not touched a hobby in at least over a month, save for a few club events at the start of the semester.

These are all things I need to do. I don't really have choice in my schedule, they're all to avoid negative consequences.. None of this work outside of this class really gives any satisfaction, or fits my values or anything. Doing work gets me towards the goal of graduation.

6 month: graduate, get a job back home. Year: get a job back home, have a steady apartment hopefully with friends, pay off debt, have money to visit NY friends. 5 year: still have a job, use that money to hang out with friends and get back into hobbies. 20 year: still live close to friends, still be close with NY friends, have future stuff figured out.

16. Explanatory style (7)

Not doing work for three weeks. I'd generally say I was to blame, or I guess blame burnout and my RPI course load, maybe my parents a bit for adding to my stress this semester. I really hope I pass all my classes and finish my incomplete soon in the summer with little to no long lasting consequences, but it's also possible that I never graduate and this has some very far reaching consequences.

This is part of the ABCDE model, and it's close to how I think about most things, emotional responses aren't usually helpful. Step back, look at the facts, and base your emotions and actions off that.

17. Superhero (8)

Of the superheroes that I know, Dr. Manhattan. He can pretty much bend the universe to his will. Immortality, seeing the future, etc. Hard to choose anything but one of the most overpowered options.

18. Values in Action (8)

I think I already do these things. There's a reason I chose engineering, I love learning new things about how the world works and I love using that knowledge to find creative solutions to things. I also always love finding things to appreciate, I know I often really stop to appreciate the little things more than average, so I seek those things out.

19. Importance of social relationships (9)

Emmet 5 (more close)

Sam 5 (more supported), I should reach out

Logan 4.8

Mom 4.5, I should call more consistently

Dad 4.4, I should call more consistently

Grandpa 4, I should call more consistently

Erica 4, I should spend more time more consistently

Acacia: Jackson, Willow, etc 4

Not my relationship that's "in need of repair", but Sam and Emmet haven't been around each other in a while, I'd really love to see them at least coexisting again

20. Gratitude Letter (11)

Not sharing it here, but I wrote a letter to someone I consider a best friend from back home that I definitely don't talk to often enough, it was nice to write :)

21. 3 Kind Things (12)

I've learned to recognize the opportunities when they arise. I could help people cook dinner, I could clean up the house just because, help people at the embedded hardware club with projects, etc.

22. Design a happy workplace (13)

Giving immediate and/or personalized feedback, let them see the real world impact of their work, and encourage employees to generally talk and form social relationships
